

## Explanation of the Laboklin-form

You can request one or more DNA test package (s) or swabs via the website [www.laboklin.nl](http://www.laboklin.nl). On the website, choose “DNA tests” at the top of the menu and then “order test package”. You will then receive the swabs at home. Depending on the type of test, you will receive the result 5 to 21 days after sending the swabs.

### ***Remember to submit two swaps always!!!***

Please use the enclosed form with sending the swaps. This provides a number of advantages:

1. By using the Laboklin-ALAEU form you will receive the standard agreed discount on the tests.
2. A copy of the test results will automatically be sent to [office@alaeu.com](mailto:office@alaeu.com). This means that you no longer have to send this yourself.
3. The form can be completed on the computer, so if you fill in the part with the fixed data and save it, you can use it every time; that will save you a lot of time.

Tips for completing the form:

- The top part on the first page, the part intended for the vet, does not need to be completed. After all, we purchase the swaps ourselves.
  - Of course fill in everything in the owner section. You could scan and past your signature.
  - On page 2 you indicate for which dog you want the tests, and what tests. The main test numbers and names are:
    - 8107 DNA-profile
    - 8109 DNA-profiel with qualifying of parentage (\*)
    - 8158 DM exon2
    - 8127 PRCD-PRA
    - 8195 Furnishing (Improper Coat)
    - 8152 EIC
- (\*) If you send the DNA profile of another lab of both parents, the parentage qualification can also be carried out.

If you want to have other tests performed in addition to these tests, you can download the catalog on their website: [https://nl.laboklin.info/wp-content/uploads/laboklin\\_catalogus\\_2020-2021\\_nl\\_zonder\\_prijzen.pdf](https://nl.laboklin.info/wp-content/uploads/laboklin_catalogus_2020-2021_nl_zonder_prijzen.pdf)

- We do not work with certificate, so **DO NOT** tick this box.
